STUDENT NAME:	Francisco Sandoval Hernández
SUPERVISOR NAME:	Moisés Martínez Muñoz

TUTORING SESSION Nº:

☒ 1. Start
☐ 2. State of the Art / Previous Research
☐ 3. Project Plan
☐ 4. Project Development
☐ 5. Technical Work Closure
☐ 6. Report Review
☐ 7. Other: Specify

DATE: 08/01/2026
START: 19:00
END: 20:00

DISCUSSED TOPICS:

During this first tutoring session, the general idea and initial scope of the Final Degree Project were discussed. The project was proposed as a computer vision and artificial intelligence system for American Sign Language recognition from video, with the objective of studying whether isolated signs could be recognized and converted into text through a reproducible research prototype

The motivation of the project was reviewed from an accessibility perspective. The system was framed as a tool that could contribute to communication between sign language users and non-signers, while making clear that the expected result would be a research prototype and not a complete production-ready translator.

Several possible technical routes were considered. The first approach included hand detection, static handshape or letter recognition, and later dynamic sign recognition. The distinction between static signs and dynamic word-level signs was discussed, and it was agreed that the project should begin with simpler technical feasibility experiments before moving towards temporal sign recognition.

The initial constraints were also discussed. The project would be developed on local hardware, so the available GPU memory and training time would influence the choice of datasets, model size, and experimental scope. For this reason, it was agreed that the first experiments should use manageable subsets and progressively increase complexity only if the initial results were promising.

Finally, it was agreed that the next phase of the project should focus on the technical feasibility of the idea. The first tasks would be to analyze available ASL datasets, identify whether the work should begin with static signs or dynamic signs, and define a first experimental route for hand detection and recognition.

ACUERDOS PARA LA SIGUIENTE REUNIÓN:

Item	Agreement / Task	Person in Charge	Deadline
1	Analyze available datasets for ASL recognition and hand detection.	F.S.H	16/01/2026
2	Decide whether the first technical approach should focus on static signs, dynamic signs or both.	F.S.H	16/01/2026

3	Define the first experimental route for hand localization and sign recognition.	F.S.H	16/01/2026
4	Prepare the initial development environment and repository structure for experiments.	F.S.H	16/01/2026

SCHEDULED DATE OF THE NEXT MEETING: **22/01/2026 – 19:00**
