STUDENT NAME:	Francisco Sandoval Hernández
SUPERVISOR NAME:	Moisés Martínez Muñoz

TUTORING SESSION Nº:

☐ 1. Start
☐ 2. State of the Art / Previous Research
☐ 3. Project Plan
☐ 4. Project Development
☒ 5. Technical Work Closure
☐ 6. Report Review
☐ 7. Other: Specify

DATE: 10/04/2026
START: 19:00
END: 20:00

DISCUSSED TOPICS:

During this tutoring session, the closure of the main technical development work was discussed. The student presented the progress of the vocabulary-scaling experiments on progressively larger WLASL subsets. The main conclusion was that performance decreased as the number of classes increased, mainly due to the reduction in available samples per class and the difficulty of distinguishing visually similar signs with limited data.

The supervisor and student also reviewed the need to consolidate the experimental code. It was agreed that the notebook-based work should be refactored into a more reusable structure, with scripts for training, evaluation, landmark extraction and experiment execution. This would make it easier to repeat the same experiments with different datasets, seeds and model configurations.

The final validation work was discussed. The selected GRU+Attention model had to be evaluated with a more reproducible protocol, including multi-seed runs, sequence-length analysis and an independent dataset validation. MS-ASL was considered as an additional benchmark, although dataset reconstruction and missing videos were identified as practical difficulties.

The runtime prototype was also discussed. The project would include a mobile client and FastAPI server capable of receiving short video clips, extracting landmarks, loading a trained model and returning Top-K predictions. Additional prototype features were proposed, including text-to-speech, model selection from the client and a basic continuous-prediction mode based on overlapping windows.

Finally, it was agreed that the next technical step should be to finish the prototype integration and close the final validation runs before moving into the writing phase. The supervisor and student considered that the main technical contribution was the landmark-based recognition pipeline and its experimental validation, while the application would serve as an end-to-end proof of concept.

ACUERDOS PARA LA SIGUIENTE REUNIÓN:

Item	Agreement / Task	Person in Charge	Deadline
1	Finish the runtime prototype with mobile capture and FastAPI inference.	F.S.H	20/04/2026
2	Add text-to-speech support to the application.	F.S.H	20/04/2026

3	Refactor the experimental code into reusable scripts and modules.	F.S.H	23/04/2026
4	Complete the final validation runs, including sequence-length analysis and cross-dataset validation.	F.S.H	23/04/2026

SCHEDULED DATE OF THE NEXT MEETING: **23/04/2026 – 19:00**
