STUDENT NAME:	Francisco Sandoval Hernández
SUPERVISOR NAME:	Moisés Martínez Muñoz

TUTORING SESSION Nº:

☐ 1. Start
☐ 2. State of the Art / Previous Research
☐ 3. Project Plan
☐ 4. Project Development
☐ 5. Technical Work Closure
☒ 6. Report Review
☐ 7. Other: Specify

DATE: 23/04/2026
START: 19:00
END: 20:00

DISCUSSED TOPICS:

During this tutoring session, the technical work was considered sufficiently advanced to begin preparing the final report. The student and supervisor reviewed the complete project trajectory, from the initial hand-detection and static-recognition experiments to the final landmark-based word-recognition pipeline.

The structure of the report was discussed in detail. It was agreed that the document should include the project motivation and objectives, the theoretical background, the methodology and work plan, the technical development of the system, the experimental validation, the ethical evaluation and the final conclusions. The documentation work would be concentrated in this final stage of the project, after the main implementation and validation work had already been completed.

The supervisor recommended presenting the work chronologically so that the methodological pivot could be clearly understood. The report should explain why the project moved away from static letter recognition and towards landmark-based word recognition with temporal models. This explanation was considered important because the initial technical experiments were not discarded failures, but evidence used to refine the final approach.

The experimental results to include in the report were also selected. The main results would be the architecture comparison, the sequence-length sweep, the WLASL30 validation, the MS-ASL50 cross-dataset validation and the vocabulary-scaling experiments. It was agreed that these results should be supported by tables, figures, confusion matrices and clear metric definitions.

The runtime prototype was reviewed from a documentation perspective. It was agreed that the application should be described as a proof of concept rather than as the main research contribution. The report should explain the mobile client, the FastAPI server, the prediction endpoint, the Top-K output and the text-to-speech functionality, while making clear that the system recognises isolated words and is not a complete sign-language translator.

Finally, the ethical and limitation sections were discussed. The report should address accessibility motivation, privacy implications of video capture and landmark extraction, dataset bias, reproducibility limits, hardware constraints and responsible deployment. The supervisor and student agreed that the limitations should be presented explicitly and connected to future work.

ACUERDOS PARA LA SIGUIENTE REUNIÓN:

Item	Agreement / Task	Person in Charge	Deadline
1	Start writing the final report using the agreed chapter structure.	F.S.H	10/05/2026
2	Prepare the methodology and work-plan section based on the executed project phases.	F.S.H	10/05/2026
3	Organise the experimental results into tables, figures and clear validation subsections.	F.S.H	10/05/2026
4	Draft the ethical evaluation, limitations and future-work sections.	F.S.H	10/05/2026

SCHEDULED DATE OF THE NEXT MEETING: **20/05/2026 – 19:00**
