STUDENT NAME:	Francisco Sandoval Hernández
SUPERVISOR NAME:	Moisés Martínez Muñoz

TUTORING SESSION Nº:

☐ 1. Start
☐ 2. State of the Art / Previous Research
☐ 3. Project Plan
☐ 4. Project Development
☐ 5. Technical Work Closure
☐ 6. Report Review
☒ 7. Other: Final Review

DATE: 20/05/2026
START: 19:00
END: 20:00

DISCUSSED TOPICS:

During this final tutoring session, the final report and presentation were reviewed. The supervisor and student checked that the document explained the project trajectory coherently, including the initial exploration, the methodological pivot, the final architecture, the validation protocols, the prototype and the limitations.

The final conclusions were discussed. The project demonstrates that landmark-based representations can support isolated word-level ASL recognition in controlled vocabularies, especially when combined with recurrent temporal modelling and attention. The validation results on WLASL30 and MS-ASL50 support the reproducibility of the selected pipeline, while the vocabulary-scaling experiments show the limitations caused by data scarcity in larger vocabularies.

The report structure was reviewed to ensure consistency between objectives, methodology, technical development and experimental validation. The supervisor and student checked that each objective had corresponding evidence in the report, especially the landmark representation, architecture comparison, reproducible validation, cross-dataset analysis, scalability study and runtime proof of concept.

The presentation strategy for the defense was also reviewed. It was agreed that the slides should focus on the problem, motivation, methodology, technical pivot, final pipeline, main results, prototype demo, qualitative analysis and future work. The student should clearly explain that the system is a research prototype for isolated word recognition, not a complete sign-language translator.

The prototype demonstration was discussed. The demo should show the basic interaction between the mobile client and the server, including video capture, inference, Top-K predictions and text-to-speech output if available. It was agreed that the demo should be simple and robust, avoiding unnecessary risk during the defense.

Finally, pending corrections before submission were identified, including formatting, figure quality, consistency between objectives and conclusions, final bibliography review and preparation of the prototype demonstration. The final deadline was set for completing the report, slides and demo material before submission.

ACUERDOS PARA LA SIGUIENTE REUNIÓN:

Item	Agreement / Task	Person in Charge	Deadline
1	Apply the final corrections to the report before submission.	F.S.H	23/05/2026
2	Finish the final presentation slides for the defense.	F.S.H	23/05/2026
3	Prepare and test the prototype demonstration.	F.S.H	23/05/2026
4	Review conclusions, limitations, bibliography and formatting.	F.S.H	23/05/2026
