PRELIMINARY PROJECT FOR FDP

[PROJECT TITLE]

[First name Lastname1 Lastname2]

Summary

Summary of your proposed topic (the Preliminary Project), a couple of paragraphs. Very important: this section should be a summary of the preliminary project (what problem you want to solve and how), that is, of the document being presented, and not just of the technical part of the project.

The reader of this summary should have a clear understanding of the proposed project.

Keywords

Keyword 1, keyword 2, keyword 3 (maximum of 6 keywords).

Table os Contents

1 Descripción del Proyecto 1

2 Motivación 3

3 Resultados Esperados y Viabilidad 5

3.1 Resultados Esperados 5

3.2 Plazo Estimado del Desarrollo Técnico 5

3.3 Conocimientos Necesarios Adquiridos 6

3.4 Conocimientos Necesarios que se Deberán Adquirir 6

3.5 Asignaturas del Grado Relacionadas 6

4 Bibliografía 7

1 PROJECT DESCRIPTION

This document is the template to follow for the preparation of the Preliminary Project for the Final Degree Project (FDP).

When writing the final preliminary project, the student should dele**te these yellow paragraphs**, as well as all **the text highlighted in yellow in the different sections** and add their own content.

On the cover page, **replace** the [text in brackets] with the actual information.

All chapters should start on an odd-numbered page (the template does this automatically, but it's good to double-check).

Specifically, this section should detail **the project title** (how you want to title your project) and provide **a brief introduction** to clarify its objective. In other words, this section should include a project description that is clear enough to allow for an evaluation of its purpose, content, and scope.

An outline of the technologies to be used in the development can also be included, as long as they are innovative and have required or will require significant research by the student.

VERY IMPORTANT: Pay attention to writing. A consistent tone should be used throughout the document regarding forms and verb tenses. It is suggested to use the future tense, as you are presenting a project yet to be done, and to use the impersonal form. The document must be free of typos, spelling, grammatical, or any other type of errors to receive approval from the tutors, and it must adhere to this template in terms of structure and format.

2 MOTIVATION

In this section, the reason why the student proposes to carry out this project will be detailed. The reasons for undertaking a specific project can vary widely: personal interests, challenges, familiarity with the problem, etc.

The purpose of this section is to encourage the student to reflect on the reasons for proposing this topic. A student motivated by a specific topic is much more effective than one who has no special reason for choosing a particular project.

Choose a topic you enjoy and select technologies you feel comfortable with.

3 EXPECTED RESULTS AND FEASIBILITY

This section includes the results you expect to achieve after completing the Final Degree Project and the feasibility of the student carrying out this project.

3.1 EXPECTED RESULTS

The expected results of the project should be described. Emphasize the "why" (what problem is being solved). Technical development is always a means to an end, and the results should be expressed in relation to the goal, not the means (the technology used to solve the problem).

3.2 ESTIMATED TIME FOR TECHNICAL DEVELOPMENT

Keep in mind that the Final Degree Project is an estimated 12 ECTS workload, which corresponds to about 300 hours of the student's personal work (around 12 to 13 weeks).

These 300 hours include everything related to the Final Degree Project: meetings with the tutor, writing the report, planning, technical execution of the project, etc.

An initial estimate of the effort required for the project's technical development should be made to assess its feasibility (neither too ambitious nor too limited).

It is advisable to create a **Gantt chart** to ensure a sound planning process. Divide the project into Work Packages (as many as you deem necessary); each Work Package can be subdivided into Activities, and these Activities, if needed, can be further subdivided into Tasks. A Gantt chart is not made quickly; dedicate time to making it. If necessary, you can set this page to landscape mode to better display the Gantt chart.

3.3 Required Knowledge already Acquired

The student should detail the necessary knowledge already acquired and required for completing the project. The majority of your proposal should be feasible with the knowledge you have already gained.

3.4 Required Knowledge yet to be Acquired

The student should detail the necessary knowledge that they do not yet possess but is required for the successful completion of the project.

Additionally, it is recommended to include a plan to acquire this knowledge. Your project should not require too much additional knowledge beyond what has already been acquired. Keep in mind that the time you need to dedicate to learning these new skills is extra on top of the time needed for the project itself.

3.5 Related Degree Courses

The student should list the various degree courses related to their project and explain how they are connected to the project.

4 BIBLIOGRAPHY

The student will include some relevant bibliographic references to evaluate the feasibility and scope of the project proposal being developed. A minimum of 6 relevant references is required.

These references should follow the IEEE format.
